CERTIFICATIONS

CISSP (In Progress, April 2026) | SecurityX, DoD 8140 | SSCP | CCNA | Security+ | Eligible for Security Clearance

EXPERIENCE

AI Security Engineer | CoreDirective

Atlanta, GA | Sep 2025 - Present

- Built the SOAR platform on n8n: **14** production workflows, a master orchestrator integrating **16** services (PostgreSQL, Telegram, GitHub, Gmail, Cloudflare, Notion), and **20+** managed credential sets. Cut manual security operations by about **80%**.
- Designed n8n webhook pipelines processing security events through **10+** endpoints. Monitors **4** Gmail accounts for phishing threats, runs daily API health checks on cron, and routes all workflow failures to Telegram alerts within seconds.
- Cut alert noise from **200+** daily events to **12** that mattered by tuning Falco eBPF rules and routing critical alerts through n8n orchestration workflows to Datadog via Falcotick.
- Integrated Claude API and local Ollama into n8n for AI-powered alert triage and classification. Sensitive data stays on sandboxed Ollama; everything else routes through Claude for automated response.
- Locked down the OpenClaw AI gateway running Claude Opus against the OWASP LLM Top 10 and MITRE ATLAS. Hardened both cloud inference and NeMo-sandboxed local model pipelines.
- Red teamed every deployed skill for prompt injection, jailbreaks, prompt leakage, and data exfiltration. Fixed everything before it hit production.
- Closed every exposed port by routing all traffic through Cloudflare Zero Trust tunnels with mTLS.
- Built the CI/CD security pipeline from scratch. Every PR gets scanned by Trivy, Semgrep, and Gitleaks before OPA gates decide if it merges. All images Cosign-signed with Syft SBOMs.
- Wrote all infrastructure as Terraform: **16** files managing **30+** resources on DigitalOcean and Cloudflare, with **8** OPA/Rego policies that block non-compliant deployments.
- Killed standing admin accounts. Deployed Teleport for JIT access with session recording, and centralized IAM through Keycloak SSO with least-privilege role assignments.

IT Security & Operations Manager | Texaco

Atlanta, GA | Mar 2022 - Feb 2026

- Ran incident response for **3** retail locations. Investigated POS skimmer attempts using Wireshark, tracked down credential compromises, and dealt with unauthorized vendor access.
- Wrote a **6**-step IR runbook that dropped containment time from **8** hours to **90** minutes.
- Tore apart a flat network and rebuilt it as **4** VLANs: POS traffic, back-office, guest Wi-Fi, and management. Validated with Nmap. Lateral movement dropped to zero.
- Set up Splunk as the SIEM, pulling logs from every endpoint and network device. Built correlation rules and automated response workflows that dropped detection time from **48** hours to under **4**.
- Hardened Active Directory: enforced Group Policy baselines, purged stale accounts, stripped unnecessary admin rights, and automated credential rotation. Went from **14** critical audit findings to **2**.
- Owned PCI DSS compliance for **45+** devices. Ran quarterly Nessus scans, validated network segmentation, kept SAQ docs current, and coordinated with the payment processor.
- Wrote Python and PowerShell scripts to automate patch deployment, user provisioning, and compliance reporting through scheduled tasks and REST API integrations. Saved about **12** hours a week.
- Created AI governance policies based on NIST AI RMF. Deployed LLM tools for phishing detection and incident triage at all **3** locations.

TECHNICAL SKILLS

Technical Skills: n8n, SOAR, Workflow Automation, REST APIs, Webhook Architecture, Python, Bash, PowerShell, PostgreSQL, Splunk, Docker, Linux, Terraform, HCL, AWS, Google Cloud, Kubernetes, OPA/Rego, Burp Suite, OWASP ZAP, LLM Security, DevSecOps, FISMA, RMF

EDUCATION

Georgia State University, J. Mack Robinson College of Business

B.B.A. in Computer Information Systems (Cybersecurity) | BBA in Business Economics

May 2026 | GPA: 3.7 | Dean's List
