

# USSS SAEF Practice — Answer Key

---

Tests 01, 02, 03 · 90 questions total · Audited & verified 2026-04-18

**For Linda.** This is the full answer key for the three 30-question practice tests. After you finish each test cold (no peeking), score yourself section by section. Bring this sheet to the real exam review, not during the test itself.

**Three answers were corrected after the audit:** Test 02 Q2 (now B, was C), Test 02 Q9 (now B, was E), Test 03 Q20 (now C, was A). Your test HTML files have been updated to match.

## TEST 01 — Answer Key (30 questions)

### At-a-Glance Answer Grid

|       |       |       |       |       |
|-------|-------|-------|-------|-------|
| 1. A  | 2. D  | 3. B  | 4. A  | 5. C  |
| 6. E  | 7. C  | 8. B  | 9. D  | 10. B |
| 11. B | 12. C | 13. C | 14. B | 15. C |
| 16. B | 17. B | 18. B | 19. C | 20. D |
| 21. B | 22. B | 23. B | 24. A | 25. B |
| 26. A | 27. A | 28. E | 29. C | 30. A |

#### Section A — Figural Reasoning (Q1–10)

**1. A** — Pattern alternates: upright square, diamond, upright, diamond, upright. Position 5 returns to an upright square.

**2. D** — All other figures have the dot INSIDE the shape. Only the hexagon has the dot outside.

**3. B** — A 90° clockwise rotation moves the top-left dot to the top-right corner; the diagonal ends at top-right / bottom-left.

**4. A** — A horizontal mirror flips left/right. The right-angle stays at the bottom but moves to the left side; the dot moves with it.

**5. C** — Each row holds 1, 2, then 3 dots; row 3 is triangles, so the missing cell is a triangle with 3 dots.

**6. E** — On a cross-shaped cube net, the star (top flap) and the filled dot (bottom flap) fold to opposite faces of the cube.

**7. C** — One hole in a folded sheet creates a mirrored pair when unfolded — two holes symmetric across the fold line.

**8. B** — Only B contains the target triangle in the same orientation (apex at top, base at bottom), embedded inside the larger figure.

**9. D** — The shaded quadrant rotates 90° clockwise each step. Top → Right → Bottom → Left.

**10. B** — A is to B as a small shape becomes a small shape concentric inside a larger same-type shape. Small square → small square inside a larger square.

## Section B — Detail Observation (Q11–20)

**11. B** — The clock face read 10:25.

**12. C** — The woman near the plant was the one in red.

**13. C** — Four people total: man at desk, woman in red, child in blue, guard near the door.

**14. B** — The man at the reception desk had a brown briefcase next to him.

**15. C** — A small security camera with a red indicator light was mounted in the upper-right corner.

**16. B** — GTV-419. (Option A, GVT-419, transposes the letters — a classic trap.)

**17. B** — B-2 was printed on the blue sign on the central pillar.

**18. B** — Tall figure in gray hooded sweatshirt and blue jeans with a dark duffel bag at his feet.

**19. C** — Red pickup truck on the right side.

**20. D** — The blonde figure in the white shirt was on the LEFT side of the scene, walking away from the parked cars.

## Section C — Logic-Based Reasoning (Q21–30)

**21. B** — If Reyes was on protective detail (a non-administrative assignment), then by contrapositive she must have completed weapons qualification this quarter.

**22. B** — By contrapositive: if no alarm sounded, then any vehicle that entered must have had a valid credential.

**23. B** — Counterfeit bills seized in this district are all on bond paper. This bill is on cotton, so it was not seized as one of those counterfeits in this district.

**24. A** — Contrapositive: if a person carried personal electronics into the venue, they are NOT on the advance team.

**25. B** — Diaz is last (4th). Chen relieves Avery directly, so Chen comes immediately after Avery; Avery is before Brown. Only sequence: Avery, Chen, Brown, Diaz.

**26. A** — Contrapositive: if a statement is admitted, then it was NOT made before counsel arrived. So counsel had arrived first.

**27. A** — "All who passed are bilingual" contrapositive is "anyone not bilingual did not pass." Park is not bilingual, so Park did not pass.

**28. E** — Impoundment requires BOTH conditions (stolen AND on federal property). Knowing only that it's stolen tells you nothing about location.

**29. C** — "All on Detail K hold TS clearance" does NOT mean "all TS holders are on Detail K." Vega holding TS is consistent with either. Cannot determine.

**30. A** — Contrapositive: if a motorcade used the primary corridor (was NOT rerouted), then the threat level was NOT RED.

## TEST 02 — Answer Key (30 questions)

### At-a-Glance Answer Grid

|       |       |       |       |       |
|-------|-------|-------|-------|-------|
| 1. B  | 2. B  | 3. E  | 4. D  | 5. C  |
| 6. B  | 7. D  | 8. A  | 9. B  | 10. B |
| 11. B | 12. B | 13. C | 14. B | 15. B |
| 16. B | 17. B | 18. C | 19. B | 20. B |
| 21. C | 22. C | 23. A | 24. A | 25. A |
| 26. C | 27. E | 28. E | 29. C | 30. C |

**Corrections from earlier version:** Q2 is now B (was C — correct triangle count is 6, not 8). Q9 is now B (was E — only squares 1 & 6 end up opposite; 2 & 5 do not).

### Section A — Figural Reasoning (Q1–10)

**1. B** — Up → up-right (45° CW) → right (90°) → down-right (135°) → next is straight DOWN (180°).

**2. B** — 6 triangles total. Only triangles bounded by drawn segments: (1) outer whole triangle; (2) left half; (3) right half; (4) top half above the horizontal line; (5) top-left small; (6) top-right small. The bottom trapezoids are NOT triangles — no drawn segment connects the horizontal line's endpoints to the base midpoint.

**3. E** — Each row goes: empty → one line → two crossed lines. Row 3 triangle with X inside.

**4. D** — Two folds create 4 layers. One punch at a corner of the folded piece creates 4 holes when fully unfolded, one in each corner.

**5. C** — C preserves the object's identity (same proportions, dot position moves to the adjacent face as rotation predicts). A is a mirror. D and E are entirely different shapes.

**6. B** — Differences are +2 each step: 1, 3, 5, 7, 9. Next is 9 dots.

**7. D** — Assume a regular pentagon. A regular pentagon has 5 lines of symmetry — one through each vertex to the midpoint of the opposite side.

**8. A** — The rule from A→B is: rotate 90° clockwise AND add an inner dot. Apply to C: rotate the T 90° CW, then add a dot.

**9. B** — Fold the net using square 3 as the bottom face. Square 1 folds to the back, square 6 folds to the front, so 1 & 6 are opposite. Squares 2 and 4 become left and right (opposite). Square 5 wraps over 4 to become the TOP. So 2 & 5 are left-and-top — ADJACENT, not opposite. Only 1 & 6 is an opposite pair.

**10. B** — Each step: +1 side, −5 radius. Triangle (3, r30) → Square (4, r25) → Pentagon (5, r20) → Hexagon (6, r15) → Heptagon (7, r10).

## Section B — Detail Observation (Q11–20)

**11. B** — Gate A7 on the blue sign.

**12. B** — Clock displayed 6:10.

**13. C** — A small red suitcase was on the floor near the metal detector.

**14. B** — The traveler walking through carried a small blue handbag.

**15. B** — The second traveler in line wore a pink shirt and held a passport.

**16. B** — "FEDERAL BLDG 2045" in gold on a black sign.

**17. B** — GOV-01 on the black SUV.

**18. C** — Five columns visible across the building front.

**19. B** — Man in a dark jacket talking on a phone near the curb.

**20. B** — A blue USPS-style mailbox on the left sidewalk.

## Section C — Logic-Based Reasoning (Q21–30)

**21. C** — Chain modus tollens. Torres→Yu, Yu→Kim. NOT Kim, so NOT Yu, so NOT Torres.

**22. C** — Logged-by-17:00 implies available, but the reverse is not stated. Available evidence could be from before or after 17:00. Time cannot be determined.

**23. A** — "No badge → escorted off" by contrapositive means "not escorted off → has a badge." Marcus is not escorted, so he has a badge.

**24. A** — "Reliable ONLY IF (line of sight AND within 50 feet)" means reliable → both conditions. Contrapositive: if NOT line of sight, then NOT reliable. Unreliable.

**25. A** — R is 5th. Q immediately before T. P before Q. S before P. Only order: S, P, Q, T, R.

**26. C** — The rule says "fewer than 12 points → NOT admissible." It does NOT say "12+ points → admissible." Cannot determine.

**27. E** — Chen responded Tuesday, so Chen is on graveyard. No graveyard is on swing, so Chen is NOT on swing (B). Also, all Tuesday responders were graveyard, so no swing shift responded (D). Both B and D follow.

**28. E** — Two contrapositives chain. Rule 2 contrapositive: "east not open → north not closed." East is closed, so north is OPEN (D). Rule 1 contrapositive: "north not closed → west not open." North is open, so west is NOT open (B). Both B and D follow.

**29. C** — "Most field agents are trained" does not mean "most trained are field agents." A few non-field agents are also trained. Cannot determine.

**30. C** — The premises contradict: only Level 3 may enter; 774 entered; 774 is Level 1. At least one premise must be false. The correct move is recognizing the contradiction, not inventing exceptions.

## TEST 03 — Answer Key (30 questions)

### At-a-Glance Answer Grid

|       |       |       |       |       |
|-------|-------|-------|-------|-------|
| 1. A  | 2. D  | 3. B  | 4. C  | 5. C  |
| 6. E  | 7. D  | 8. A  | 9. A  | 10. A |
| 11. B | 12. B | 13. B | 14. B | 15. C |
| 16. B | 17. B | 18. B | 19. B | 20. C |
| 21. B | 22. A | 23. B | 24. A | 25. B |
| 26. A | 27. B | 28. C | 29. C | 30. B |

**Correction from earlier version:** Q20 is now C (was A — both Scene 5 and Scene 6 contain key red objects, so option C correctly captures both).

### Section A — Figural Reasoning (Q1–10)

1. **A** — 180° rotation flips top-bottom AND left-right. The F lands upside-down and backward.
2. **D** — 14 total squares: 9 small (3×3), 4 medium (2×2 overlapping), 1 large (whole grid).  $9 + 4 + 1 = 14$ .
3. **B** — Columns keep shape (square/circle/triangle), rows add internal lines (empty → 1 bar → X). Row 3 × column 3 = triangle with X inside.
4. **C** — Front rectangle, top circle, side rectangle — a cylinder lying on its side.
5. **C** — Differences: +4, +6, +8, so next is +10 = 30. (Sequence is  $n^2+n$ : 2, 6, 12, 20, 30.)
6. **E** — A–D are all rotations of the same L-tetromino. E is a T-tetromino — a different piece that cannot be obtained by rotating the L.

**7. D** — Each fold doubles layer count:  $1 \rightarrow 2 \rightarrow 4 \rightarrow 8$  layers. One punch through 8 layers creates 8 holes when unfolded.

**8. A** — The overlap region is a lens-shaped area where the circle and square intersect.

**9. A** — Outer rotates  $45^\circ$  CW each step; inner rotates  $45^\circ$  CCW. Next: outer down-right, inner down-left.

**10. A** — Shapes: triangle(3)  $\rightarrow$  square(4)  $\rightarrow$  pentagon(5)  $\rightarrow$  hexagon(6)  $\rightarrow$  heptagon(7). Dots cycle 1, 2, 3, 1, 2. So heptagon with 2 dots.

## Section B — Observation under Interference (Q11–20)

**11. B** — "First National Bank" in gold lettering on a dark blue sign.

**12. B** — Three teller windows along the counter.

**13. B** — Green dress (the younger woman was in green, NOT red — the red was her PURSE, a distraction trap).

**14. B** — Wall clock showed 3:00.

**15. C** — An armed guard in a dark uniform stood on the right with a visible sidearm.

**16. B** — Train #214 on the silver train car.

**17. B** — Digital clock read 08:47 in red LED.

**18. B** — Young man in black hoodie, headphones, blue backpack.

**19. B** — "LINE 2 — CENTRAL STATION" on the blue sign.

**20. C** — Both scenes had key red objects: Scene 5 — the red purse; Scene 6 — the red train-door accent and the red LED digital clock. This question tests cross-scene observation under interference.

## Section C — Logic-Based Reasoning (Q21–30)

**21. B** — Chain modus tollens. Scene  $\rightarrow$  DNA  $\rightarrow$  99%. Match is 47% (not  $>99\%$ ), so NOT DNA, so NOT at scene.

- 22. A** — Exactly 3 of 5 are bilingual. Diaz is (1/3 known). Cole and Evers are NOT. The remaining 2 bilingual slots must be Azar AND Bray.
- 23. B** — "Alarm → dispatch within 30 seconds." Dispatch at 14:02:15 means alarm was no earlier than 14:01:45.
- 24. A** — "Only vehicles with red placards may park in VIP." Vehicle X is parked there, so (assuming legal parking) it has a red placard.
- 25. B** — D is 4th. C→F consecutive. Only B (A, E, B, D, C, F) satisfies all five constraints.
- 26. A** — "Requires Level 2 → requires witness signature." No witness signature. Modus tollens: NOT Level 2 required.
- 27. B** — "No Lee-handled evidence has been disputed." Bag 1199 has been disputed, so Lee did not handle it.
- 28. C** — Biconditional: unlock ↔ (biometric AND keycard). NOT unlock ↔ (NOT biometric OR NOT keycard). At least one failed. (D claims BOTH — too strong.)
- 29. C** — "Overnight → per-diem" does NOT mean "per-diem → overnight" (affirming the consequent). Cannot determine.
- 30. B** — Only "Bates truthful" is consistent with exactly-one-truthful. Alvarez-truthful forces Cruz-truthful (contradicts exactly one). Cruz-truthful forces Bates-truthful (same contradiction). So Bates.

**Scoring guide (per test, out of 30).**

27–30: exam-ready.

22–26: solid — drill the weak section.

17–21: study LBR contrapositives, cube nets, and observation chunking.

≤16: slow down and rebuild fundamentals before attempting the next test.

**Across all three tests (out of 90):** 80+ is strong; 70–79 is a passing zone with room to tighten; below 70 needs targeted drill before the real SAE.

**LBR traps to memorize:** Affirming the consequent ( $P \rightarrow Q$  and  $Q$  does NOT give you  $P$ ). Denying the antecedent ( $P \rightarrow Q$  and not- $P$  does NOT give you not- $Q$ ). Valid moves are modus ponens and modus tollens only.

**Observation tips:** Plates and numbers are the most-tested details on the real exam — read each one twice, mentally chunk (GTV-419 = "letters then numbers"). Count people deliberately, including uniformed staff and children. Note clothing color, distinctive items, and direction of movement.

**Cube nets:** Pick one square as the "bottom" and mentally fold each adjacent square up. Squares that start three positions apart along a straight strip end up opposite; squares two apart end up adjacent.
