

CCNA 200-301 Gumroad Optimization

All fields ready to copy and paste. Based on consumer psychology research + full product audit.

FIELD 1: PRODUCT TITLE

Gumroad field: Name

CCNA 200-301 v1.1 Study System | Notion Template

Already updated. No change needed.

FIELD 2: DESCRIPTION

Gumroad field: Description (Product tab). Copy everything below.

You're about to spend \$300 on a Cisco exam. What's your plan to pass it?

Most people buy the CCNA and wing it. They watch random YouTube videos. They highlight the OCG. They "study" for months and still walk into Pearson VUE with zero confidence.

Then they fail. And they're out \$300 plus months of their life.

The problem was never effort. It was never intelligence. It was that nobody gave you an actual system.

This is the system.

A complete CCNA 200-301 study environment built in Notion with 10 interconnected databases and 30+ custom views. It turns a massive 6-domain exam into a structured, trackable, completable process.

What changes when you start using this:

You open one workspace and everything is there. Every topic mapped to the official exam objectives. Every concept organized by domain so you know exactly what to study next, what you've already mastered, and where the gaps are.

You stop guessing. You stop jumping between 14 browser tabs. You stop wondering "am I even studying the right stuff?"

Instead you sit down, open your system, and make measurable progress every single session.

What's inside:

Exam Readiness Tracker across all 6 CCNA domains with confidence scoring and priority ranking

Knowledge Base for every core networking concept (OSI model, TCP/UDP, subnetting, IPv6, VLANs, routing protocols, and more)

Practice Exam Mistakes tracker that auto-links your wrong answers to the exact concepts you need to review

Accountability Matrix aligned to Jeremy's IT Lab Days 1 through 63

Port Numbers and Protocol Reference (SSH 22, HTTP 80, HTTPS 443, SNMP 161, and dozens more)

Command Line Grimoire with Cisco IOS syntax for every command you need

80+ CCNA Acronym database (OSPF, EIGRP, BGP, STP, AAA, IPsec, REST, JSON, YAML)

Lab Environment Log with pre-built templates for documenting your hands-on Packet Tracer work

Study Analytics dashboard tracking hours, sessions, and study efficiency
Career Pipeline to track certifications, job applications, and opportunities
DoK Framework: a 4-level cognitive study system that tells you HOW to study each topic based on what the exam actually tests
Mobile-optimized views so you can study from your phone
ADHD-friendly design with minimal manual entry and auto-updating dashboards
Who this is built for:
Career changers studying for the CCNA who need structure, not another random resource. Help desk techs trying to break into networking. College students working toward their first Cisco cert. Anyone who learns better with a system than with chaos.
If you have ADHD or just struggle to stay consistent with self study, this was literally designed with that in mind.
The guarantee:
You get 7 days to try the full system. If it doesn't work for you, full refund. No questions.
Your \$300 exam voucher deserves a real plan behind it. This is that plan.

FIELD 3: SUMMARY

Gumroad field: Summary (shows on product card/search)

A complete CCNA 200-301 study system built in Notion. 10 databases, 30+ views, DoK Framework. Track every exam domain, see your progress, and walk into test day knowing you covered everything. 7-day money back guarantee.

FIELD 4: TAGS

Gumroad field: Tags (up to 5)

- 1 ccna 200-301
- 2 cisco ccna
- 3 it certification
- 4 notion template
- 5 ccna study guide

Remove "career development" from current tags. Replace with above.

FIELD 5: ADDITIONAL DETAILS

Gumroad field: Additional Details (key/value pairs)

Label	Value
Format	Notion Template (duplicate to your workspace)
Exam Coverage	All 6 CCNA 200-301 domains

Databases	10 interconnected with 30+ views
Updates	Lifetime access to future updates
Refund	7-day full refund, no questions asked

FIELD 6: SETTINGS CHANGES

Do these 3 things in Gumroad Settings:

1. Turn ON Gumroad Discover — Puts your product in front of Gumroad's built-in audience for free. You currently have zero organic traffic from Gumroad.
2. Turn ON "Allow customers to pay what they want" with minimum \$39.99 — Some buyers pay MORE when given the option. It's a trust signal.
3. Add a profile photo and bio to your Gumroad seller profile (coredirective1) — Empty profiles kill trust. Buyers check the seller.

FIELD 7: CONTENT PAGE UPDATE

Post-purchase setup guide (Content tab)

Find and replace every instance of "Cyber-Squire OS" with "CCNA Study System" in the setup guide. The branding should match what the customer just bought. Keep the 4-step setup instructions, just update the product name throughout.

FIELD 8: COVER IMAGE

Gumroad field: Cover (1280x720 recommended)

Use the included ccna-cover-1280x720.pdf file. Open it, screenshot or export as PNG, then upload to Gumroad as your cover image. This replaces the current desert landscape photo.

Research shows a product mockup cover converts 2x over a generic stock image. The included cover uses the Signal Architecture design system with dark background, teal accents, and feature metrics that communicate value instantly.

FIELD 9: THUMBNAIL

Gumroad field: Thumbnail (600x600)

Use the included ccna-thumb-600x600.pdf. Export as PNG and upload. The thumbnail is designed to be readable even at small sizes in search results.

PRIORITY ORDER

Highest impact first. Items 1-4 take under 5 minutes.

#	Field	Action	Impact
1	Description	Paste the copy above	Highest
2	Summary	Paste the one-liner	High
3	Tags	Replace current 5 tags	High

4	Turn on Discover	One toggle in Settings	High
5	Cover Image	Upload the included PDF/PNG	High
6	Thumbnail	Upload the included PDF/PNG	Medium
7	Additional Details	Add 5 key/value pairs	Medium
8	Content Page	Find/replace Cyber-Squire OS	Low
9	Settings	PWYW + Profile	Low
